ITAM Tooling Platform

Reduce the risk, cost & complexity of implementing Snow

Implementing any major software platform like Snow requires a large investment of time, money and infrastructure, not to mention specialist resources with the right skills and accreditations. With capabilities in the platform increasing to include automation and cloud optimization, maximizing the investment return requires a much wider range of skills and resources.

Due to the size and increasing complexity of the target operating estates, it is critical that specialists with the right expertise and accreditations are engaged to successfully implement and configure the Snow platform, including validating Trustworthy Data from the integrated data sources and entitlement uploads. Maximizing the value from Snow also validating the reporting output and license / cloud modelling.

> "Due to the size and increasing complexity of the target operating estates, it is critical that specialists with the right level of expertise and accreditations are engaged to successfully implement and configure the Snow platform"
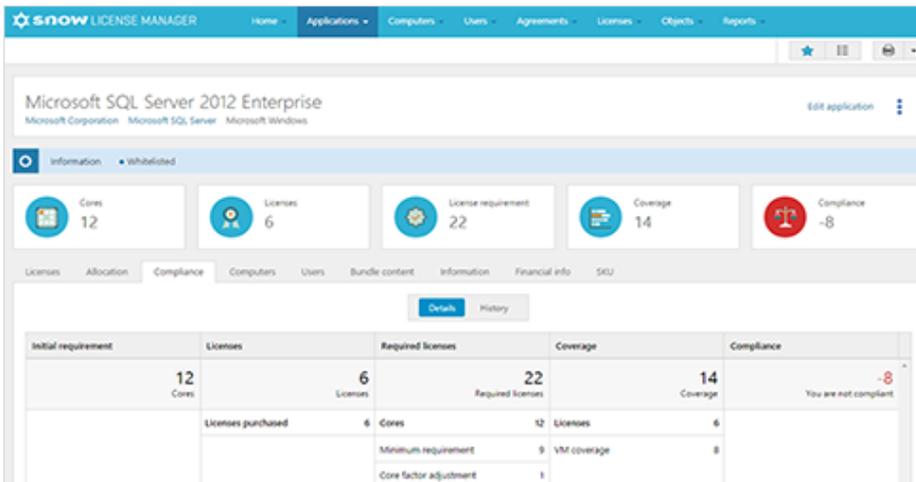

Snow-as-a-Service

As an accredited partner of Snow Software, we are able to provide Snow as a hosted cloud service, delivered from our secure hosting center. Maintained by our team of qualified consultants and engineers, the platform helps minimize the cost and deployment complexity of the platform and is ideal for smaller enterprise and geographically dispersed customers. By reducing the cost of infrastructure and platform management, the Snow hosted platform provides a rapid enablement solution for implementing Snow and getting rapid value from the platform.

The solution includes both Snow License Manager and Snow Inventory, providing access to both across a web-based deployment. This allows customers to easily implement and securely configure the client devices as the platform has been designed and configured to optimize integration and security.

Charged through a simple device-based SaaS model, the Snow hosted platform provides a rapid and simple way to implement an ITAM tool and move to a rapid return of investment.

"Our solution reduces the cost of infrastructure and platform management. Our Snow hosted platform can be rapidly deployed, allowing clients to achieve quicker value from their platform investments"

Our vision is to be the leading independent, global provider of Software & Cloud Portfolio Management and optimization services for our clients and partners.

Providing the intelligence our clients use to govern their digital transformation journey. Optimizing their software portfolio to avoid unnecessary cost and risk, whilst driving value from their software and cloud investments throughout their lifecycle.
